## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of the invention of Group I (claims 12-25) is noted. Applicants' arguments with respect to the restriction requirement are not found to be persuasive. Specifically, claims 34-37 (Group III) still belong to class 74. While claims 26-33 (Group II) belong to class 606, they are directed to a different invention as stated in the office action mailed on October 23, 2006. Accordingly, the restriction requirement is still deemed proper and is therefore made FINAL.

### ***Drawings***

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference numeral "140" has been used to designate different parts in Figures 5 and 6. The Examiner also suggests that the pivot axes be shown on the drawings for clarity.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3733

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Landsberger (US 6,113,599).

Landsberger discloses an external bone fixation device including a central member 140, a first pivot segment 130 for driven rotation about a first pivot axis and a second pivot segment 132 for driven rotation about a second pivot axis wherein the first pivot axis is substantially perpendicular to the second pivot axis (Fig. 2, col. 11, lines 9-67 and col. 12, lines 1-27).

Claims 12-25 are rejected under 35 U.S.C. 102(b) as being anticipated by McCarthy et al. (US 5,846,245).

McCarthy et al. disclose an external bone fixation device including: first and second mounting members 350; a central member 380; first and second translation segments 340, 360 coupled to the central member for controlled translation along first and second translation axes that are substantially perpendicular to each other; and first and second pivot segments 384, 385 pivotably coupled to the central member (Figs. 4-6 and 15, col. 10, lines 31-67 and col. 11, lines 1-7).
